1 2 digit number divided by 2

$$ab/2$$

$$a \text{ even} \Rightarrow \frac{a}{2} \frac{b}{2}$$

$$b \text{ even} \Rightarrow \frac{a-1}{2} \frac{10+b}{2}$$

2 examples

$$26/2 = [2/2][6/2] = 13$$

$$34/2 = [\frac{3-1}{2} \frac{10+4}{2}] = [\frac{2}{2} \frac{14}{2}] = 17$$
