

doesn't work for CAGED diatonic

allows shredding patterns × 3 more for each start note being the first second or third on the string

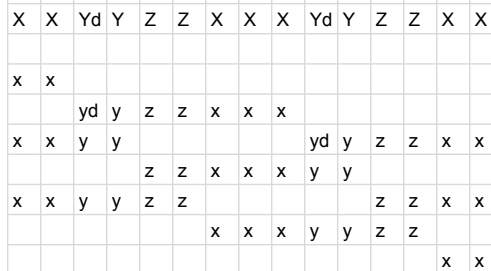

so 35 patterns, but easier to memorize even then normal shredding

simplifies CAGED pentatonic

if you can learn to modify when you go between 4th and 5th string, that extra effort pays off enormously because you have far fewer fingerings to memorize

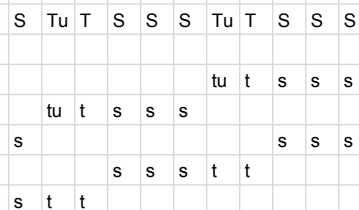

so I recommend learn 3 and 2 plus CAGED, you get a lot of freedom when you see many ways to follow an interval

diatonic

pentatonic uses subset with 2 notes per string

includes CAGED pentatonic

pentatonic with diatonic system

is CAGED diatonic all in the aligned region?

aligned region
